C.I.A. Reports on Lost Secrets

WASHINGTON, April 28 (AP) — A United States intelligence report says secret information passed by a radar engineer to a Polish spy involved such key American weapons systems as the B-1 bomber and the radar-evading Stealth bomber.

Information in more than 20 highly classified reports probably reached Soviet intelligence and "put in jeopardy existing weapons and advanced future weapon systems of the United States and its allies," according to the account of the Central Intelligence Agency.

Intelligence officials said the report was prepared from information gathered by the entire United States intelligence community and was provided at the request of Congress in a declassified form.

The report, prepared this month, provided the most specific material yet on information the Central Intelligence Agency said had been given by the engineer, William H. Bell, to a Polish intelligence agent over a three-year period.

Mr. Bell, a former radar project engineer with the Hughes Aircraft Compa-

ny, pleaded guilty last year in Los Angeles to charges that he had transferred filmed copies of documents to Marion Zacharski, who posed as a Polish businessman.

Mr. Bell was sentenced to up to eight years in prison and was fined \$10,000. Mr. Zacharski drew a life term for conspiring to commit espionage.

According to the C.I.A. report, the classified documents "of prime importance to the West" included information on these secrets:

9A quiet radar system for B-1 and Stealth bombers.

9The vital lock-down, shoot-down radar system.

9An all-weather radar system for tanks.

9An experimental radar system for the United States Navy.

9The Phoenix air-to-air missile carried on Navy F-14 fighters.

9A ship-borne surveillance radar.

9A new air-to-air missile, the improved Hawk surface-to-air missile, a Patriot air defense missile, an air defense system for the North Atlantic Treaty Organization.
